EDUCATION

State University, Austin, TX

May 2027

B.S. in Data Science, GPA 3.8

Relevant coursework: Statistics, Linear Algebra, Database Systems, Machine Learning, Data Structures

PROFESSIONAL EXPERIENCE

Data Analytics Intern

Jun 2025 – Aug 2025

Northwind Logistics, Austin, TX

- Built an ETL pipeline in Python and SQL consolidating 14 regional shipment feeds into a single Snowflake table, cutting the weekly reporting cycle from 6 hours to 20 minutes.
- Designed a Power BI dashboard tracking on-time delivery by lane, adopted by the operations team as their standing Monday review.
- Ran an A/B test on two dispatch-routing heuristics across 1,200 shipments and found no significant difference (p = 0.41), stopping a planned rollout.

Undergraduate Research Assistant

Jan 2025 – Present

State University Statistics Department, Austin, TX

- Fit logistic regression and gradient-boosted models on a 90,000-row survey dataset to predict program dropout, reaching 0.81 AUC on held-out data.
- Wrote the pandas data-cleaning layer now used by the other four research assistants.

PROJECTS

Transit Delay Forecaster

2025

Forecasting model over three years of city bus arrival data

- Decomposed three years of arrival data into seasonal and trend components, then regressed residuals on weather and event-calendar features.
- Reduced median absolute error to 2.4 minutes against a 4.1-minute naive baseline.
- Published as a Streamlit dashboard with per-route drilldown, used by roughly 40 riders weekly.

Grocery Price Tracker

2024

Scraper and warehouse tracking 400 SKUs daily

- Scraped four retailer sites nightly into SQLite, handling layout changes by failing loudly rather than writing partial rows.
- Clustered price trajectories to group items that move together, surfacing three supplier-linked cohorts.
- Wrote the deduplication logic that reconciles the same product listed under different retailer SKUs.

SKILLS

Languages: Python, SQL, R Libraries: pandas, NumPy, scikit-learn, matplotlib Tools: Power BI, Tableau, Snowflake, Git, AWS

Methods: Regression, hypothesis testing, clustering, forecasting, A/B testing
